EXAMINER

CHIO, TAT CHI

ART UNIT

PAPER NUMBER

2621

NOTIFICATION DATE

DELIVERY MODE

04/18/2008

ELECTRONIC

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

<b>Office Action Summary</b>	<b>Application No.</b> 10/625,603	<b>Applicant(s)</b> OGAWA, HIDEAKI	
	<b>Examiner</b> TAT CHI CHIO	<b>Art Unit</b> 2621	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 23 January 2008.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-28 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-28 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments with respect to claims 1-28 have been considered but are moot in view of the new ground(s) of rejection.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 5, 7, and 11-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Satoh et al. (5,914,787) in view of Tanaka et al. (US 6,845,438 B1).

**Consider claims 1, 5, and 7,** Satoh et al. teach a moving image recording apparatus for recording moving image data on a recording medium, said moving image recording apparatus comprising: a judgment device for judging whether a record format of said recording medium is suitable for recording said moving image data (col. 33, line 42-col. 34, line 12 and Fig. 91); recording medium controller for controlling operation of said recording medium, said recording medium controller reformatting said recording medium with a high-speed record format suitable for the record of said moving image data when said judgment device judges that said record format is unsuitable for recording said moving image data (col. 33, line 42-col. 34, line 12 and Fig. 91).

However, Satoh et al. do not explicitly teach achieving high-speed recording of moving image by reformatting the memory card in a camera.

Tanaka et al. teach that it is possible to achieve high-speed recording of moving image in a camera (col. 24, lines 11-32). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to try to achieve high-speed recording of moving image by reformatting the recording medium.

**Consider claims 11, 17, and 23**, Tanaka et al. further teach the moving image recording apparatus, wherein suitability of said recording medium is determined based on the cluster size of the recording medium (col. 24, lines 19-22).

**Consider claim 12, 18, and 24**, Tanaka et al. further teach the moving image recording apparatus, wherein a high-speed format corresponds to a record format with a cluster size large enough to enable the recording medium to record the moving image data at a speed fast enough such that photography of the moving image data can be performed substantially continuously (col. 24, lines 11-32, since the high-speed writing in the subsequent image writing sequence is enabled, the cluster size is large enough to record moving image data at a speed fast enough such that photography).

**Consider claim 13, 19, and 25**, Tanaka et al. further teach the moving image recording apparatus wherein an unsuitable record format for recording said moving image data corresponds to a record format with a cluster size which is insufficient to enable the recording medium to record the moving image data at a speed fast enough such that photography of the moving image data can be performed substantially

continuously (col. 24, lines 11-32, since the cluster size is not large enough, then erase operation is needed to achieve high speed recording).

**Consider claims 14, 20, and 26**, Satoh et al. teach the moving image recording apparatus wherein said judgment device judges the suitability of the record format of said recording medium before photography or during photography of the moving image data (col. 33, line 64-col. 34, line 5).

**Consider claims 15, 21, and 27**, Satoh et al. teach the moving image recording apparatus wherein said judgment device judges the suitability of the record format of said recording medium upon a depression of a shutter button initiating photography of the moving image data (col. 33, line 64-col. 34, line 5).

**Consider claims 16, 22, and 28**, Satoh et al. teach the moving image recording apparatus wherein said judgment device judges the suitability of the record format of said recording medium upon a switching of the moving image recording apparatus to a moving image photography mode (col. 36, lines 45-51).

4. Claims 2-4, 6, and 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Satoh et al. (5,914,787) in view of Tanaka et al. (US 6,845,438 B1) as applied to claims 1, 5, and 7 above, and further in view of Brown, III et al. (6,038,636).

**Consider claims 2 and 8**, Satoh et al. teach all the limitations in claim 1 but do not explicitly teach a moving image recording apparatus, wherein said recording

medium controller detects the presence or absence of existing data in said recording medium when said record format is unsuitable for recording said moving image data.

Brown, III et al. teach a moving image recording apparatus, wherein said recording medium controller detects the presence or absence of existing data in said recording medium when said record format is unsuitable for recording said moving image data (col. 14, lines 21-27). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to employ the technique of detecting whether any more files are in the recording medium to notify the controller if the recording medium is ready to be formatted.

**Consider claims 3 and 9**, Brown, III et al. further teach a moving image recording apparatus, further comprising: an internal memory for temporarily storing said existing data; and an internal memory controller for recording said existing data recorded on said recording medium onto said internal memory when said record format is unsuitable for recording said moving images data (col. 14, lines 37-45).

**Consider claims 4 and 10**, Brown, III et al. further teach a moving image recording apparatus, wherein said recording medium controller records said existing data recorded on said internal memory onto said reformatted recording medium (col. 14, lines 37-45).

**Consider claim 6**, Brown, III et al. further teach a method, further comprising the steps of: (d) detecting the presence or absence of existing data recorded on said recording medium (col. 14, lines 21-27), when said record format is judged to be unsuitable for recording said moving image data; (e) temporarily evacuating said

Art Unit: 2621

existing data to an internal memory when said existing data is in said recording medium (col. 14, lines 37-45); and (f) reconstructing said existing data evacuated to said internal memory in said reformatted recording medium (col. 14, lines 37-45).

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TAT CHI CHIO whose telephone number is (571)272-9563. The examiner can normally be reached on Monday - Thursday 9:00 AM-5:00 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thai Tran can be reached on (571)-272-7382. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2621

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
